| Fees | £9,000 or £7,000 for Alumni |
| | International: £18,600 |
| Location | London |

About this course

Public health professionals and sector experts have contributed directly to the design of this course, helping to identify the practical skills and knowledge most valued by employers. Their input ensures that teaching and assessment methods reflect real-world expectations, and you will be taught by academics with extensive professional experience.

Studying in London gives you direct access to a diverse population and one of the world's most active public health landscapes. With a wide range of public, private, and voluntary health organisations based in the city, you will benefit from excellent learning opportunities grounded in real-life practice.

This course supports the development of the knowledge, values, and competencies required to succeed in a variety of public health roles in the UK and internationally. The public health field is increasingly global, dynamic, and interdisciplinary.

To prepare you for this, you will work with real-world public health scenarios that require analysis, critical thinking, and effective planning. You will graduate with a clear understanding of population health and the social and environmental factors that influence it, positioning you for a range of public health careers or enterprise opportunities in the sector.

Careers

Graduates with a strong understanding of public health principles, combined with practical experience and applied research skills, will be well positioned for roles across the public, private, and voluntary health sectors. The course prepares you to assess population health needs, plan and evaluate interventions, and contribute to health policy and service improvement.

This course significantly enhances your employability by equipping you with practical experience, expert insights, and tailored career support that collectively prepare you for senior roles in public health across diverse global contexts.
